Table of Content

1. Introduction

1.1. Problem Definition

An increasing number of organizations have web sites. The trend is to disseminate responsibility of managing web content for the web site to the people who generate it rather than webmaster. At the same time, this scenario creates a situation in which people who are uncomfortable with working on web design are forced to complete tasks for a web site. So we make content management system is for creating, managing, and optimizing people digital experience. More specifically, a CMS is a software application that allows users to collaborate in the creation, editing, and production of digital content: web pages, blog posts, etc.
